

TILING INSTALLATION SYSTEMS

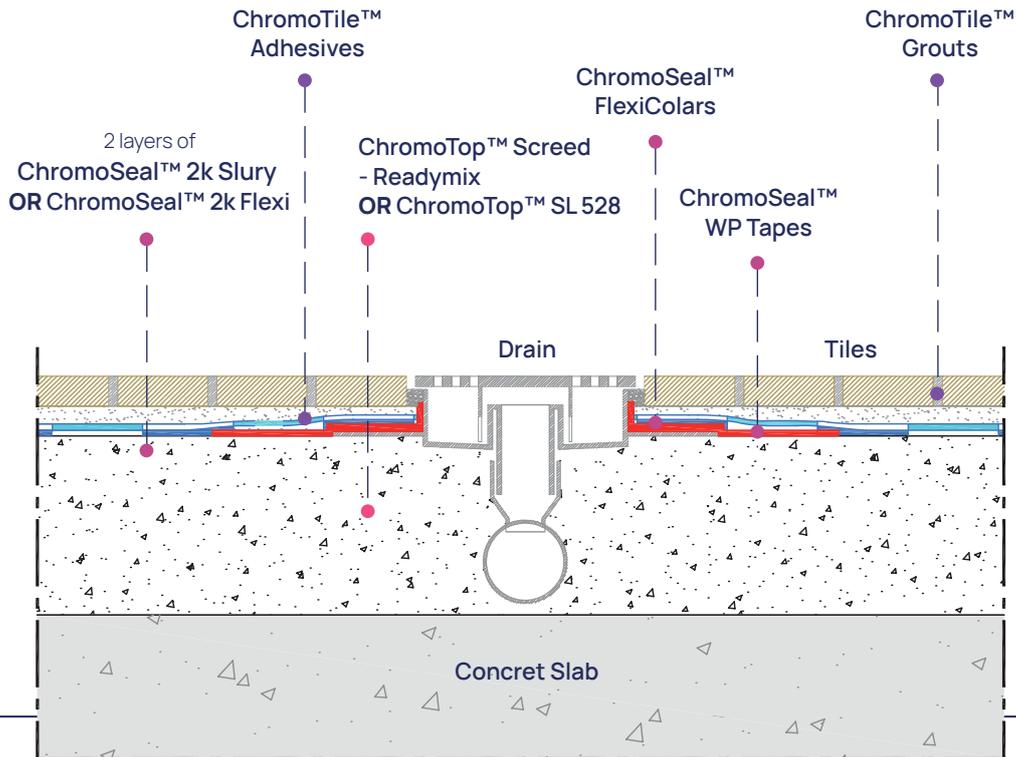

Europe's Best Technologies

Now In Middle East

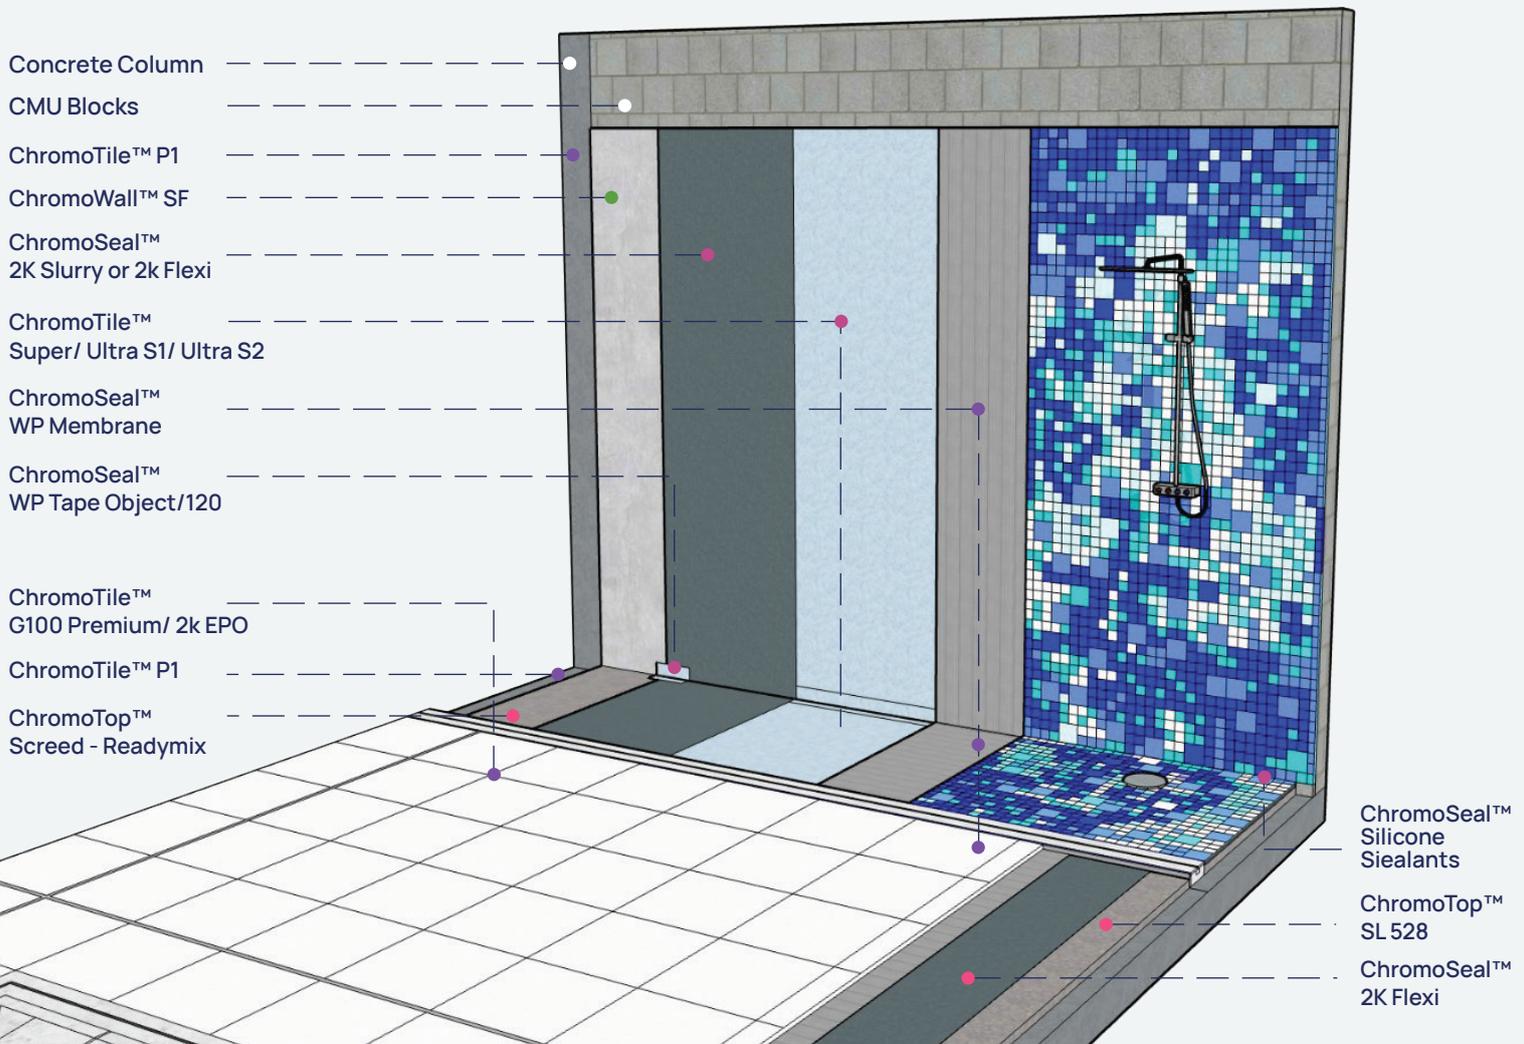

- Vast global expertise and technological innovation now available in Middle East
- Complete tiling systems for every possible tiling location
- Systems for both new and refurbishment works
- Tailored CAD details for your job
- BRANZ approved waterproofing systems (811 & 812)
- Premium European quality for a very competitive price
- Eliminate the risk. Get it right first time with ChromoTile Installation Systems

Wet Areas: Drywall or Concrete

Chromo offers a full tiling system for wet areas. It includes a waterproof layer, flexible tile adhesive, and your choice of epoxy or cement-based grout. Both prevent mold and are easy to apply. The system finishes with sealing tape and silicone for durable protection.

The illustration shows masonry walls. The Chromo Building Solutions system is approved for all types of wall substrates too.

Surface Treatment | Floor
ChromoTop™ Screed - Ready Mix

- Pre-mixed, fast-setting, shrinkage-free screed for indoor and outdoor use.

ChromoTop™ SL 528

Surface Treatment | Wall
ChromoWall™ SF

- Polymer-modified, single-component cement repair and leveling mortars that create a smooth, durable base for waterproofing and tiling.

Primers
ChromoTile™ P 1

- Synthetic resin primer for gypsum or cement surfaces.

ChromoTile™ P 2

- Resin-based primer for both porous and non-porous surfaces

Primers
ChromoTile™ P 1

- Synthetic resin primer for gypsum or cement surfaces.

ChromoTile™ P 2

- Resin-based primer for both porous and non-porous surfaces

Waterproofing Layer
ChromoSeal™ 2k Slurry

- Two-component, polymer-enhanced, fiber-reinforced elastic cement mortar for easy application, even in low temperatures.

ChromoSeal™ 2K Flexi

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not for total immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP TAPE / Object / SA / 120**

Waterproofing Layer
ChromoSeal™ 2K Flexi

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not for total immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP TAPE / Object / SA / 120**

ChromoSeal™ WP Membrane

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not suitable for immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP Tape Object**

Tile Adhesive
ChromoTile™ Adhesives Super/ Ultra S1 / Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Adhesive
ChromoTile™ Adhesives Super/ Ultra S1 / Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Grout
ChromoTile™ G100 Premium

- Two-component colored epoxy grout for joints 1-15 mm wide. Waterproof, anti-fungal, anti-bacterial, and highly resistant to chemicals and abrasion.

Tile Grout
ChromoTile™ 2k Epo

- Cement-based grout for 1-8 mm joints. Water-resistant, anti-fungal, anti-bacterial, and highly abrasion-resistant with durable colors (Class CG2).

Joint Sealant
ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

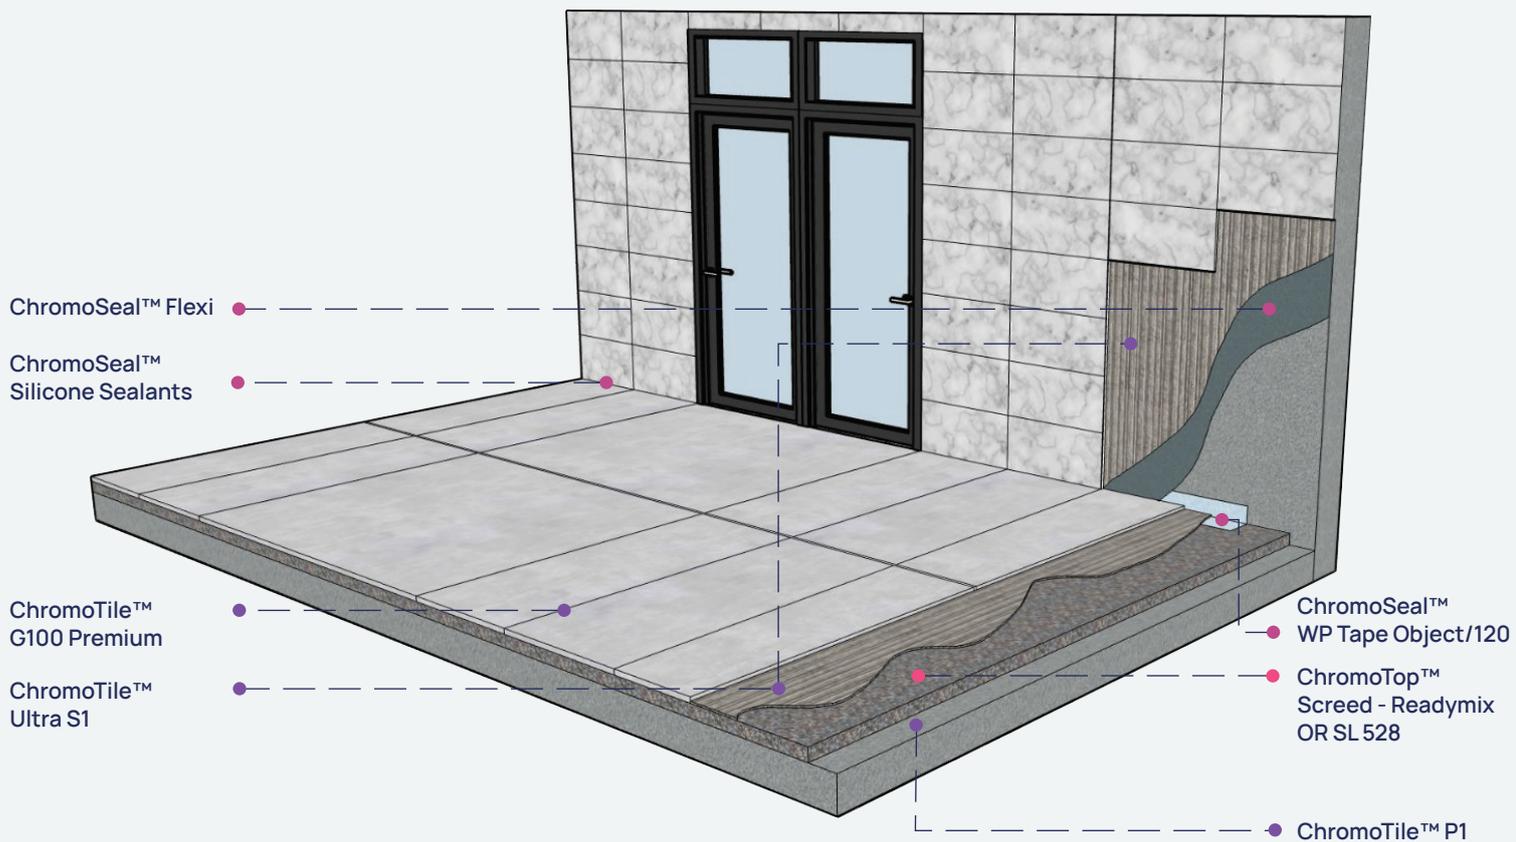

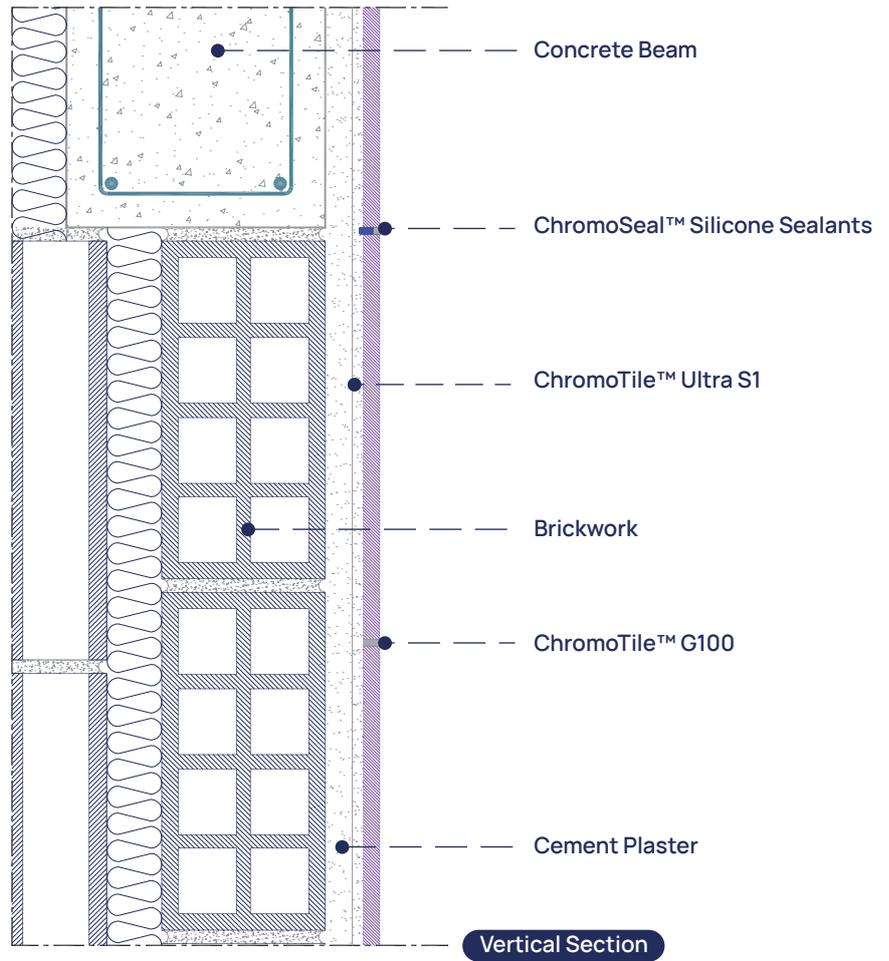

Joint Sealant
ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Facades

Chromo Building Solutions offers specialized tile adhesives and grouts for facade tiling, engineered to handle temperature fluctuations and the differing movement of façade materials. These high-polymer, flexible adhesives are applied in two layers to prevent air gaps under tiles. The waterproof, flexible grout resists abrasion and is reinforced with latex for added strength. Joints and perimeters are finished with an elastic, low-modulus silicone or polyurethane sealant, ideal for areas with high movement.

Facades

Surface Treatment | Floor
ChromoTop™ Screed - Ready Mix

- Pre-mixed, fast-setting, shrinkage-free screed for indoor and outdoor use.

ChromoSeal™ WP Membrane

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not suitable for immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP Tape Object**

Tile Adhesive
ChromoTile™ Ultra S1

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Adhesive
ChromoTile™ Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Grout
ChromoTile™ G100 Premium

- Two-component colored epoxy grout for joints 1-15 mm wide. Waterproof, anti-fungal, anti-bacterial, and highly resistant to chemicals and abrasion.

Tile Grout
ChromoTile™ 2K Epo

- Cement-based grout for 1-8 mm joints. Water-resistant, anti-fungal, anti-bacterial, and highly abrasion-resistant with durable colors (Class CG2).

Joint Sealant
ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

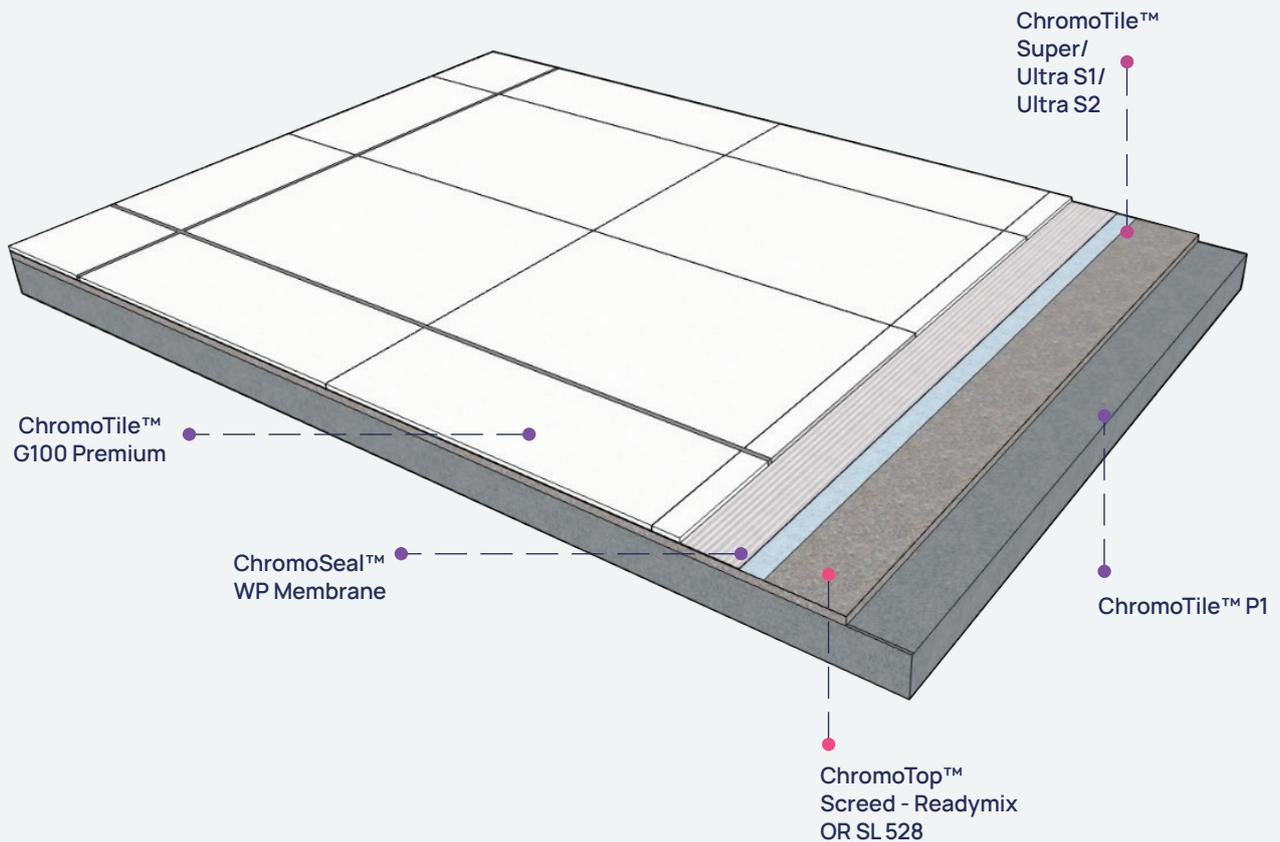

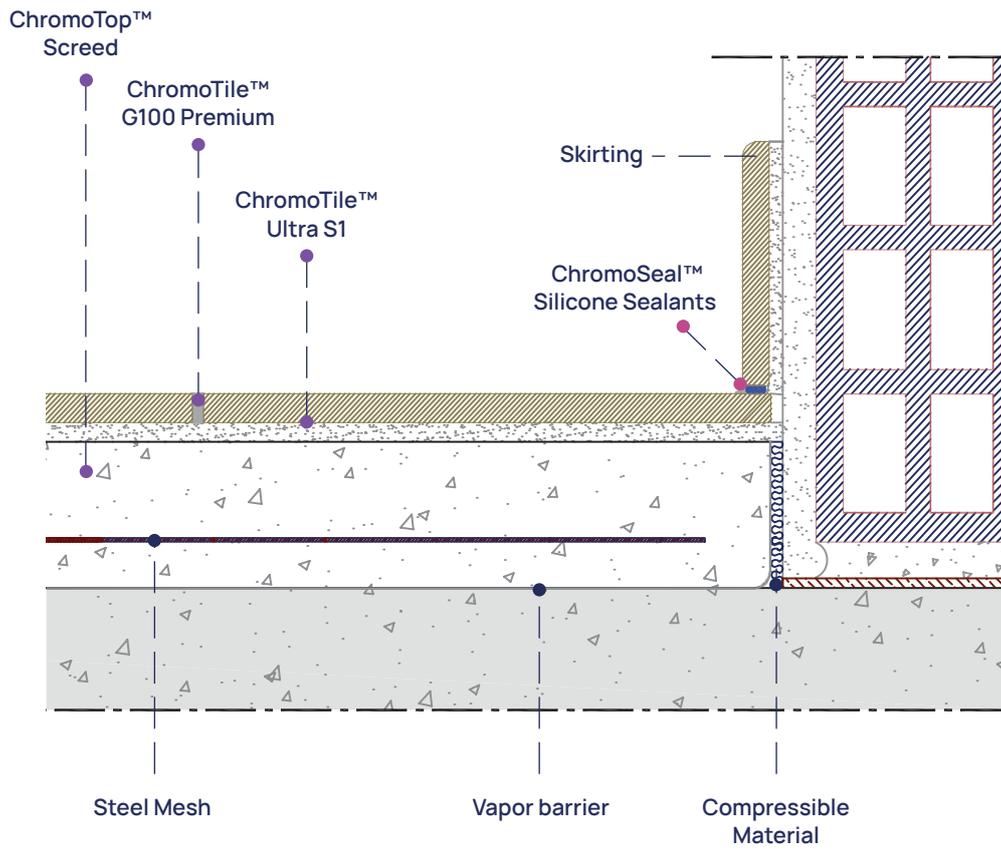

Joint Sealant
ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Large Format Tiles

For installing large-format ceramic and natural stone tiles, Chromo Building Solutions offers tailored solutions. Leveling technology creates a smooth, stable surface, preventing gaps and flaws for a polished finish. This next-generation adhesive is highly flexible, rich in polymers, and applied in two layers. A durable, low-modulus grout with strong abrasion resistance is then applied, followed by a high-performance silicone or polyurethane sealant for flexible joints and connections.

Large Format Tiles

Surface Treatment & Preparation

ChromoTop™ Screed

- A fast-drying hydraulic binder for creating subfloor screeds, offering standard setting and minimal shrinkage, suitable for both indoor and outdoor applications.

ChromoTile™ P 1

- Primer formulated with synthetic resin for prepping gypsum or cement-based surfaces.

ChromoTile™ P 2

- Primer with synthetic resin, designed for treating both porous and non-porous surfaces.

ChromoTop™ CSL 30

- Fast-hardening, self-leveling cementitious underlayment for application in thicknesses from 0.5 to 15 mm.

Surface Treatment & Preparation

Tile Adhesive

ChromoTile™ Ultra S1

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Adhesive

ChromoTile™ Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Grout

ChromoTile™ 2K Epo

- Cement-based grout for 1-8 mm joints. Water-resistant, anti-fungal, anti-bacterial, and highly abrasion-resistant with durable colors (Class CG2).

Tile Grout

ChromoTile™ G100 Premium

- Two-component colored epoxy grout for joints 1-15 mm wide. Waterproof, anti-fungal, anti-bacterial, and highly resistant to chemicals and abrasion.

Joint Sealant

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Joint Sealant

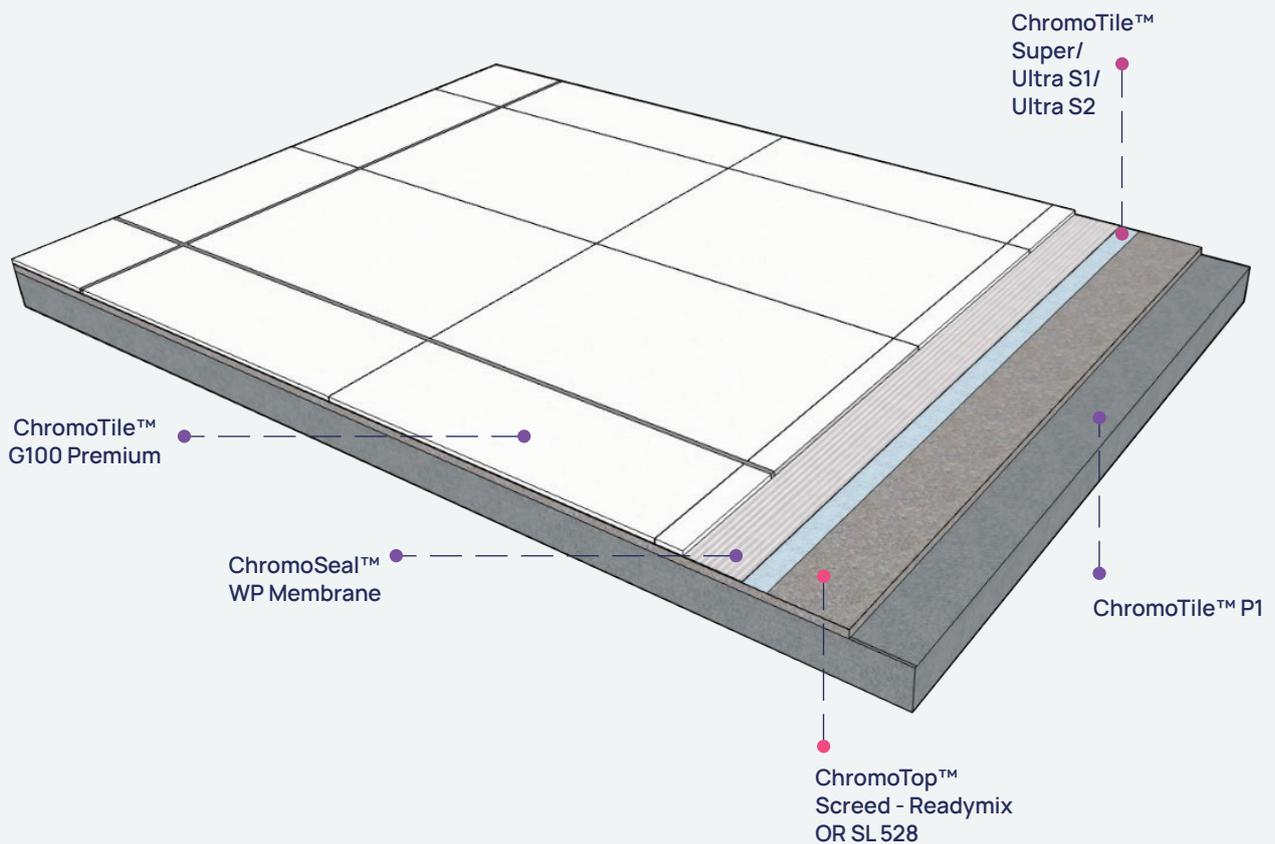

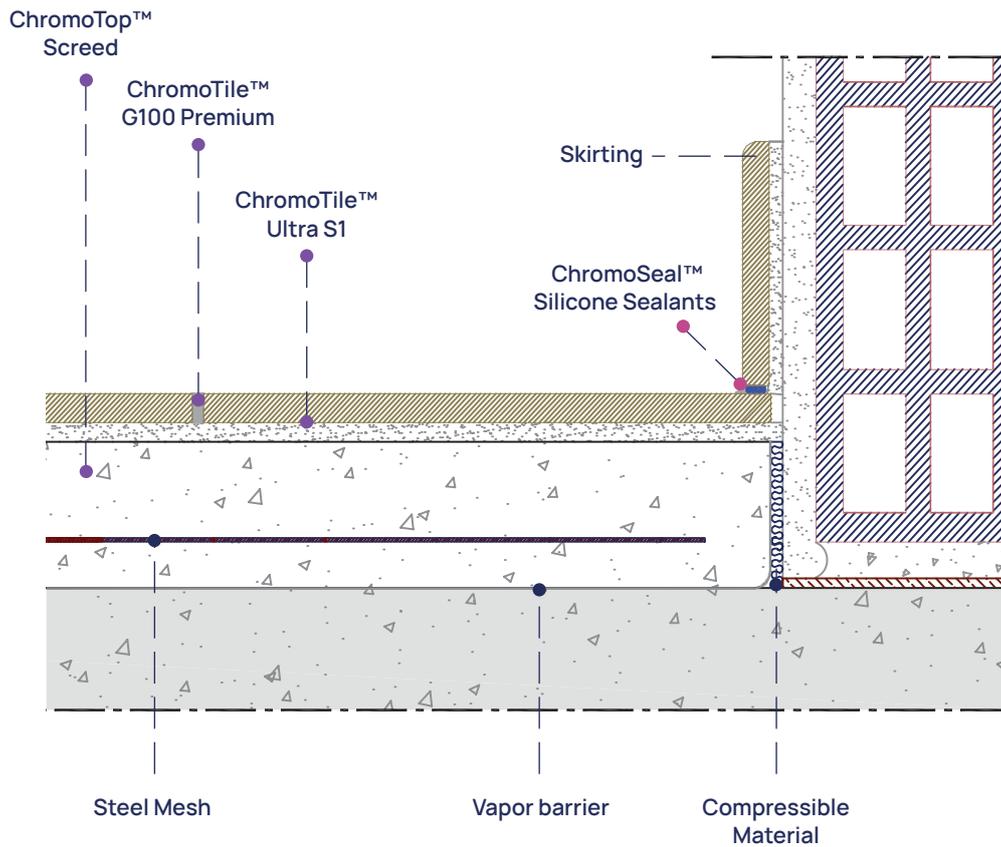

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Porcelain Tiles

Porcelain tiles are highly durable, hard, and non-absorbent, making them ideal for high-traffic public spaces like airports, train stations, and shopping centers. Chromo Building Solutions offers an advanced installation system for these tiles, including a polymer-modified adhesive for non-absorbent surfaces, a flexible, abrasion-resistant grout, and a silicone sealant for moving joints. This system ensures stability and strength under heavy use.

Porcelain Tiles

Surface Treatment

ChromoWall™ SF

- Polymer-modified, single-component cement repair and leveling mortars that create a smooth, durable base for waterproofing and tiling.

Surface Treatment

Tile Adhesive

ChromoTile™ Ultra S1

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Adhesive

ChromoTile™ Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Grout

ChromoTile™ G100 Premium

- Two-component colored epoxy grout for joints 1-15 mm wide. Waterproof, anti-fungal, anti-bacterial, and highly resistant to chemicals and abrasion.

Tile Grout

ChromoTile™ 2K Epo

- Cement-based grout for 1-8 mm joints. Water-resistant, anti-fungal, anti-bacterial, and highly abrasion-resistant with durable colors (Class CG2).

Joint Sealant

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Joint Sealant

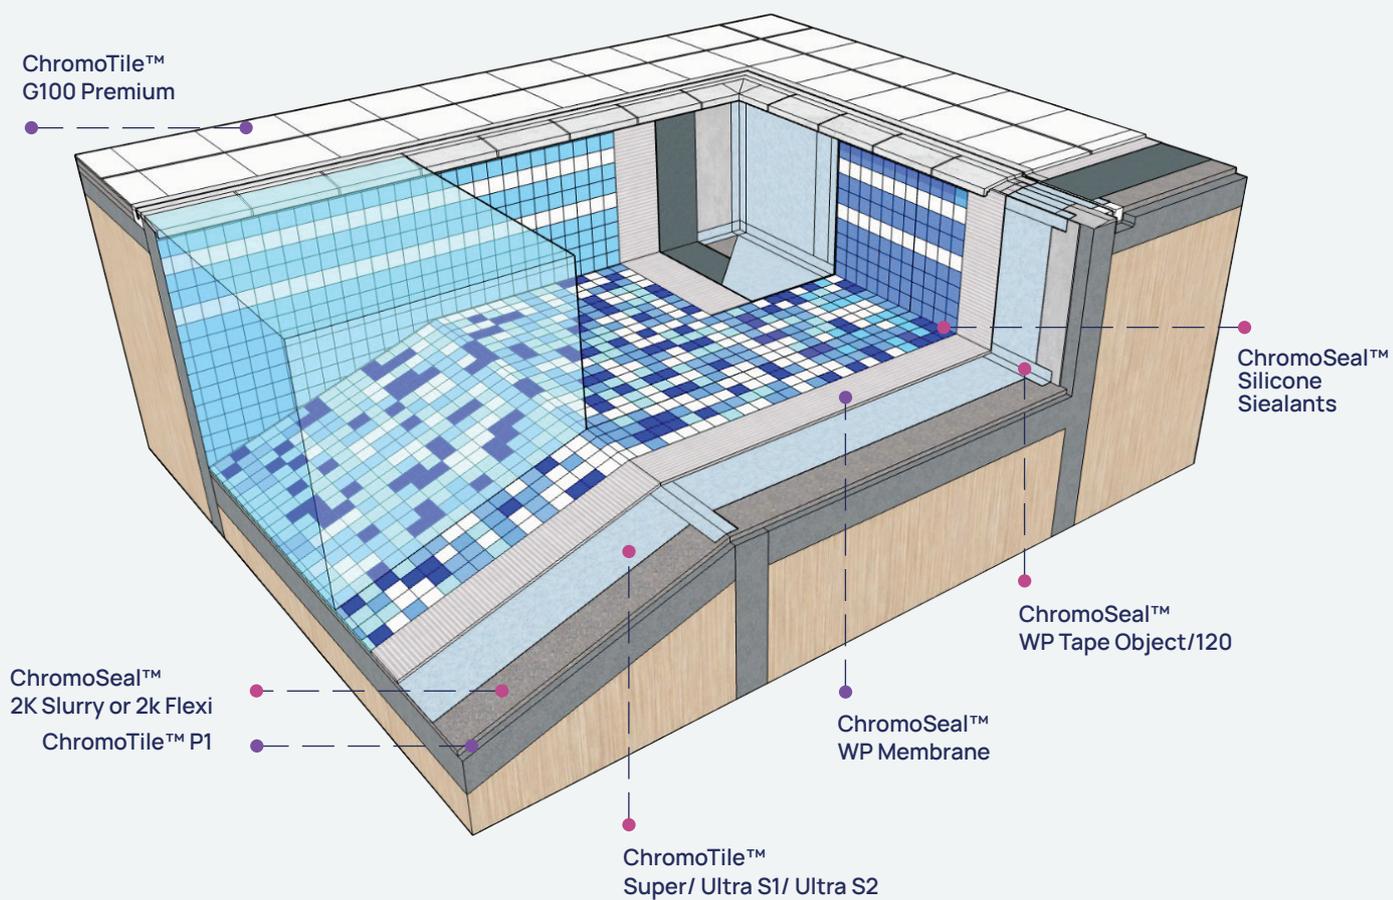

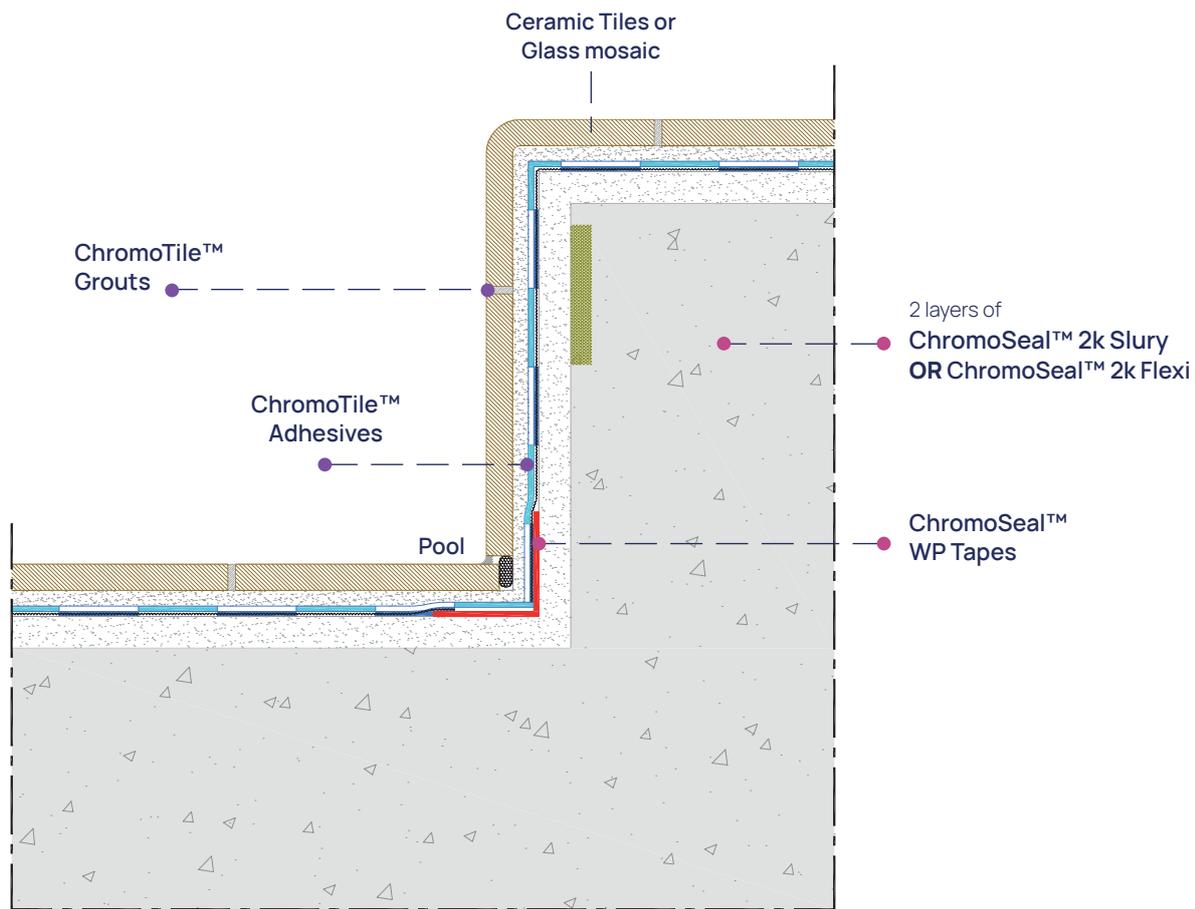

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Swimming Pools

For swimming pool tiling, Chromo Building Solutions offers a complete system to ensure durability and waterproofing. The substrate is first repaired and smoothed, followed by a two-layer, polymer-modified waterproofing mortar. Chromo's flexible adhesive then secures tiles, tolerating thermal changes and continuous water exposure. Grout options include a waterproof cementitious grout enhanced with latex for strength or a chemical-resistant epoxy grout. Moving joints are sealed with a flexible, durable silicone sealant for lasting protection.

Swimming Pools

Surface Treatment

ChromoWall™ SF

ChromoTop™ Screed - ReadyMix

- Pre-mixed, fast-setting, shrinkage-free screed for indoor and outdoor use.

Tile Adhesive

ChromoTile™ Ultra S1

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Tile Adhesive

ChromoTile™ Ultra S2

- Pre-mixed adhesive with high-quality cement, silica sands, and additives, forming flexible layers up to 15 mm. Ideal for porcelain, natural stone, façades, heated floors, pools, and industrial flooring.

Waterproofing Layer

ChromoSeal™ 2K Flexi

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not for total immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP TAPE / Object / SA / 120**

Waterproofing Layer

ChromoSeal™ 2K Flexi

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not for total immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP TAPE / Object / SA / 120**

ChromoSeal™ WP Membrane

- Ready-to-use, solvent-free liquid waterproofing that forms a flexible, crack-resistant membrane under tiles or stone. Not suitable for immersion (e.g., under shower trays). Use with: **ChromoSeal™ WP Tape Object**

Tile Grout

ChromoTile™ G100 Premium

- Two-component colored epoxy grout for joints 1-15 mm wide. Waterproof, anti-fungal, anti-bacterial, and highly resistant to chemicals and abrasion.

Tile Grout

ChromoTile™ 2K Epo

- Cement-based grout for 1-8 mm joints. Water-resistant, anti-fungal, anti-bacterial, and highly abrasion-resistant with durable colors (Class CG2).

Joint Sealant

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

Joint Sealant

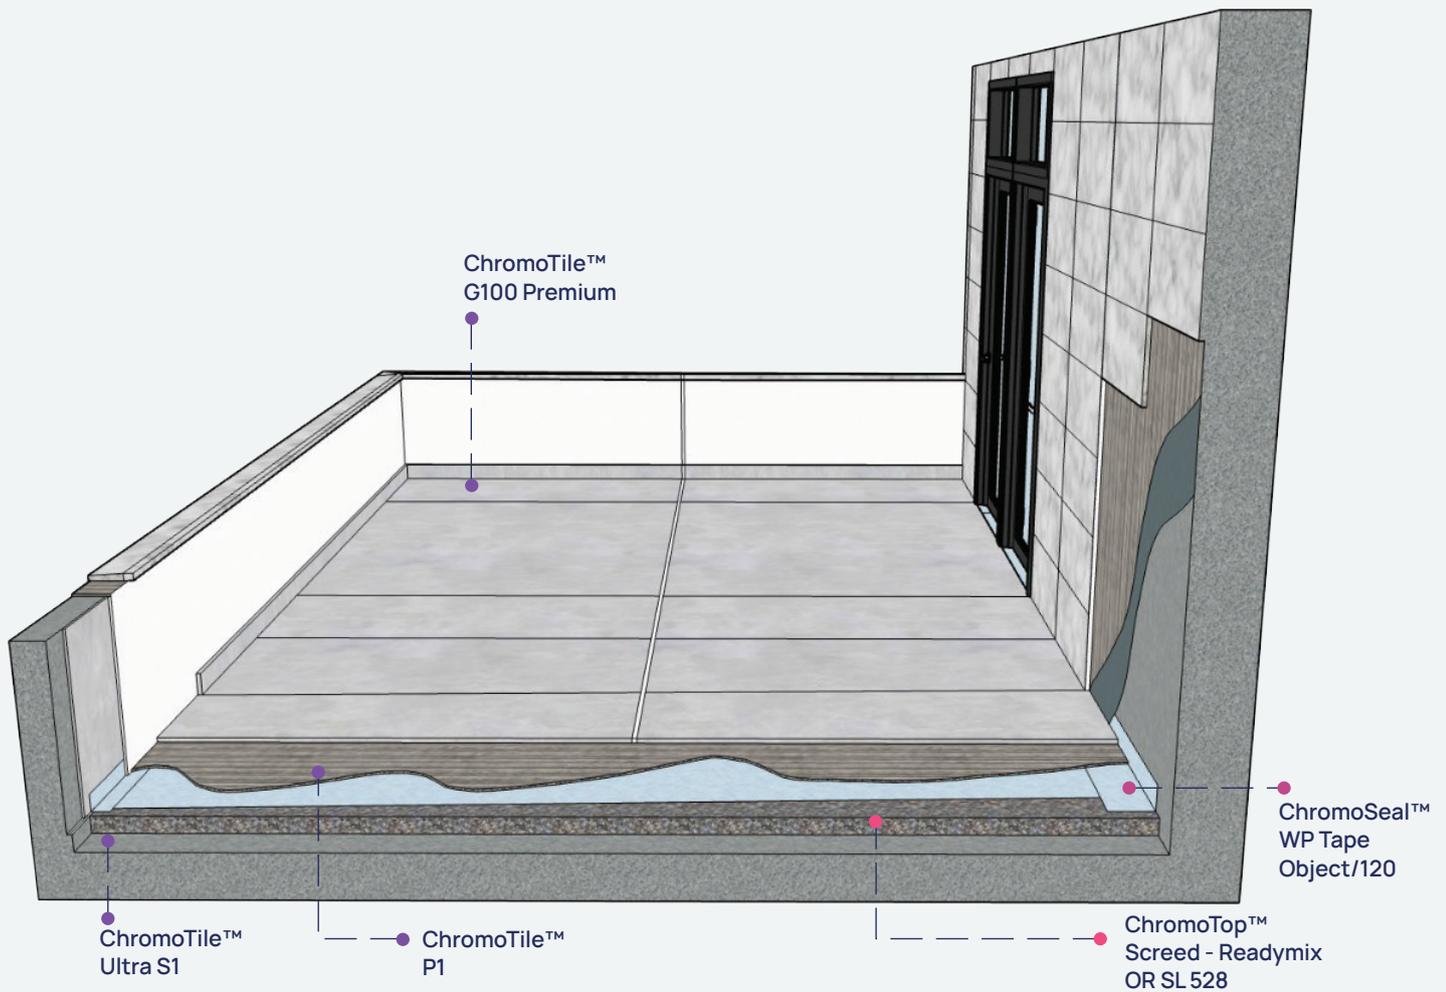

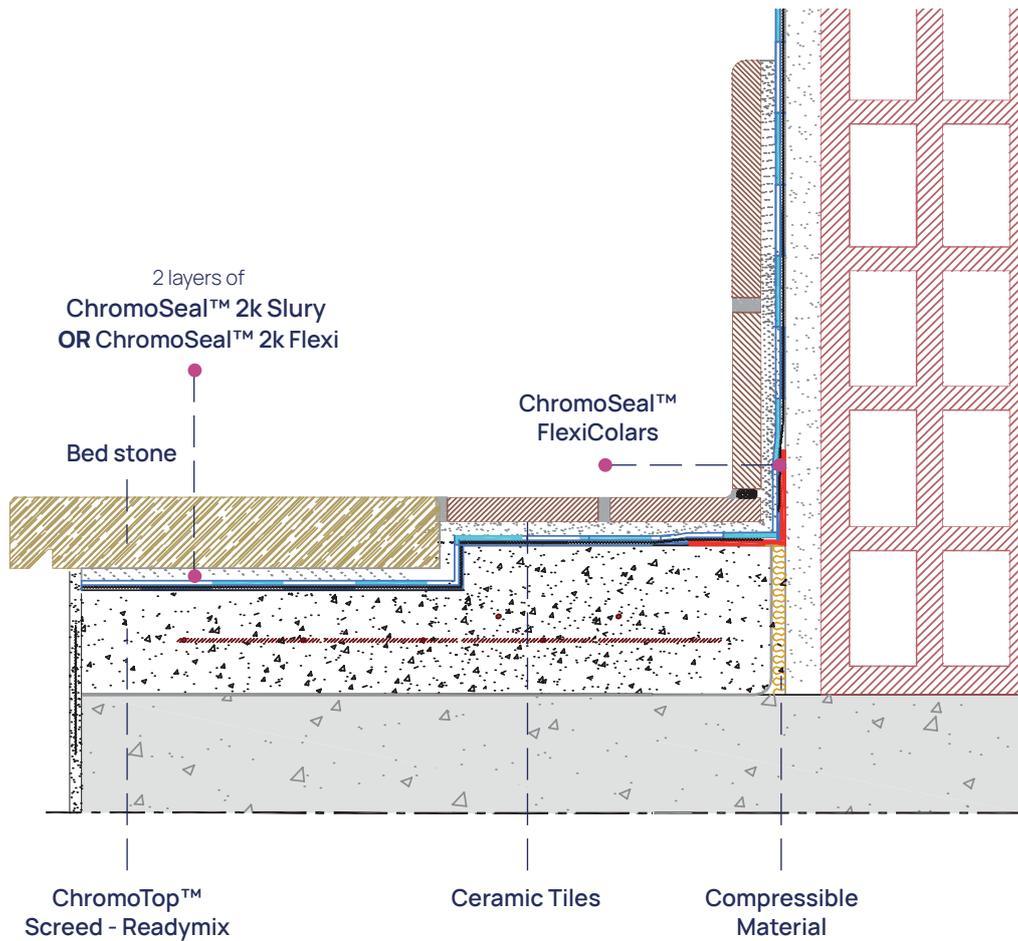

ChromoSeal™ Silicone Sealants

- Solvent-free, mildew-resistant silicone sealant for expansion joints between tiles, tubs, and sinks.

New Balconies

Tiling new balconies requires precision to avoid issues like uneven slabs, poor drainage, and inadequate waterproofing at joints. Chromo Building Solutions provides a complete system starting with a fast-setting, shrink-resistant hydraulic screed for a level, strong surface. This allows the flexible waterproofing layer to be applied within 48–24 hours. For both covered and exposed balconies, Chromo's polymer-rich adhesives and flexible grout adapt to thermal changes, ensuring durability. A high-performance elastic sealant completes the system by protecting moving joints and connections.

New Balconies

Surface Treatment

ChromoTop™ Screed

Existing Tiled Balconies

Water penetration on terraces and balconies is a common cause of building damage. Chromo Building Solutions offers a quick, cost-effective repair system that upgrades these areas without removing all existing finishes. After cleaning and removing any loose tiles or grout, Chromo's system uses thixotropic repair mortars, self-leveling layers, and flexible waterproofing. For tiling, Chromo provides durable, external-grade adhesives and waterproof, flexible grout mixed with latex for enhanced strength, meeting Class S1 standards. Finally, a high-performance, elastic polyurethane sealant protects all moving joints and connections.

Marble, Granite & Natural Stone Tiles

Chromo Building Solutions offers a system for installing marble, granite, and other moisture-resistant natural stone tiles. It starts with hydraulic subfloor screeds that provide high compressive and tensile strength, harden quickly, and have minimal shrinkage, allowing tile installation within 48–24 hours. Next, a flexible, polymer-rich cementitious adhesive secures the tiles, followed by flexible, durable cement-based grouts with strong abrasion resistance. Finally, a permanently elastic polyurethane sealant is applied to moving joints and connections for lasting stability.

Marble, Granite & Natural Stone Tiles

Surface Treatment & Preparation

ChromoTop™ Screed

- A fast-drying hydraulic binder for creating subfloor screeds, offering standard setting and minimal shrinkage, suitable for both indoor and outdoor applications.
